

Loïc Hilliou (ORCID 0000-0002-9936-8088) is associate researcher at the Institute for Polymers and Composites, University of Minho, Portugal, and in charge of the rheology lab of this institute. His research is about the relationships between the materials properties, their process-induced structure and rheology and the final properties of the resulting products. Recent studies focused on the extrusion of polymer based systems, on hybrid carrageenan hydrogels, on formulation of pastes for 3D printed lithium batteries, on polyhydroxyalkanoates, and the rheological understanding of extrusion-based additive manufacturing. He is currently the elected secretary of the Portuguese Society of Rheology.
